Experiment -10

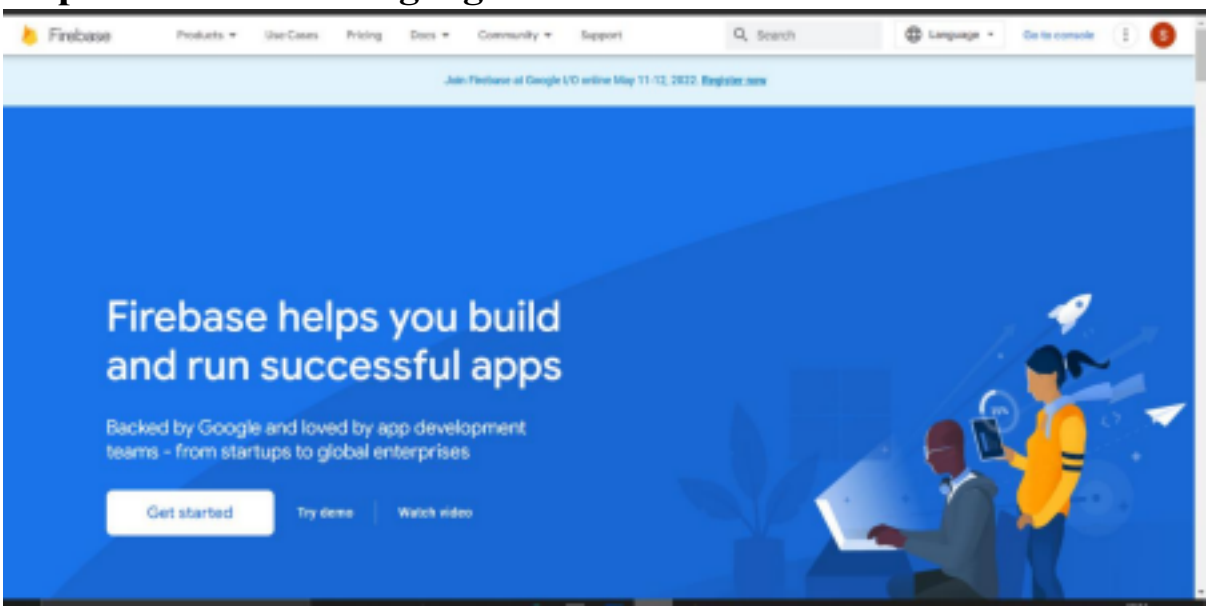
Aim: To connect Flutter UI with firebase Database

✔ **What is Firebase Database?**

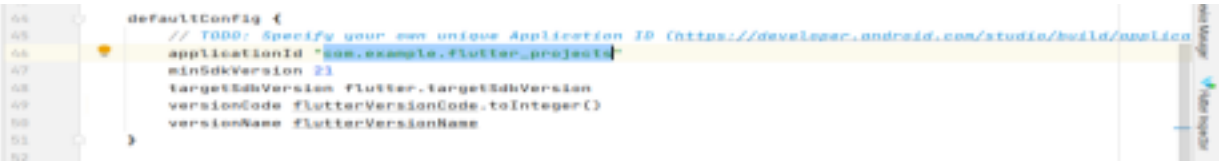
Ans: It Is a cloud hosted **NOSQL** database that stores and Synchronizes the data between users in real-time.

<u>Steps to Perform Given Experiment:-</u>

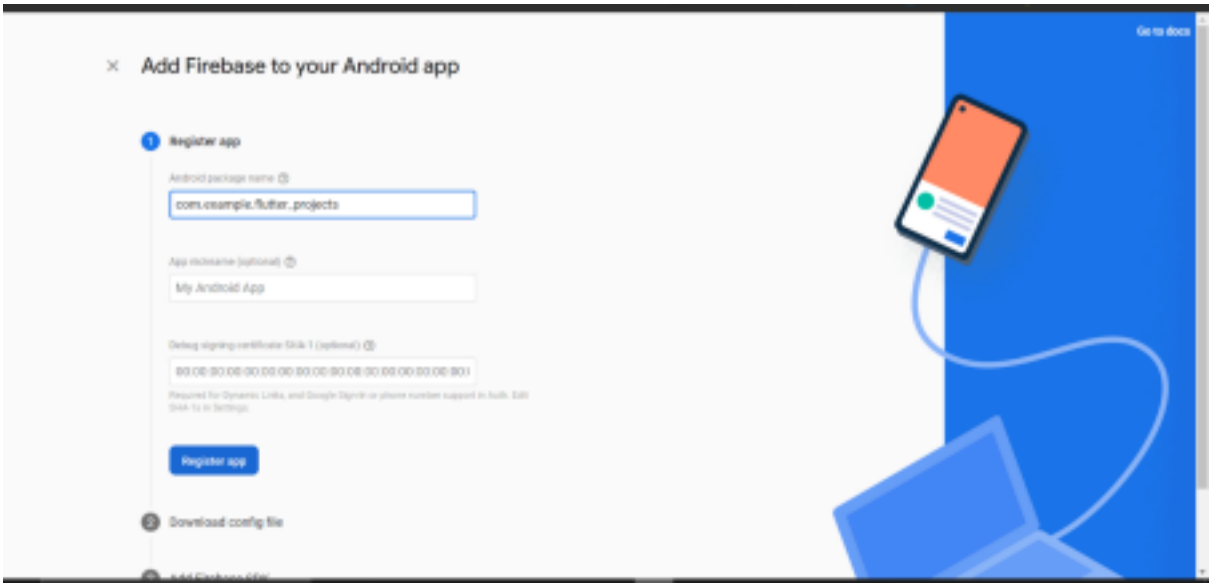
Step 1: Go to **firebase.google.com** Click on **Get Started.**



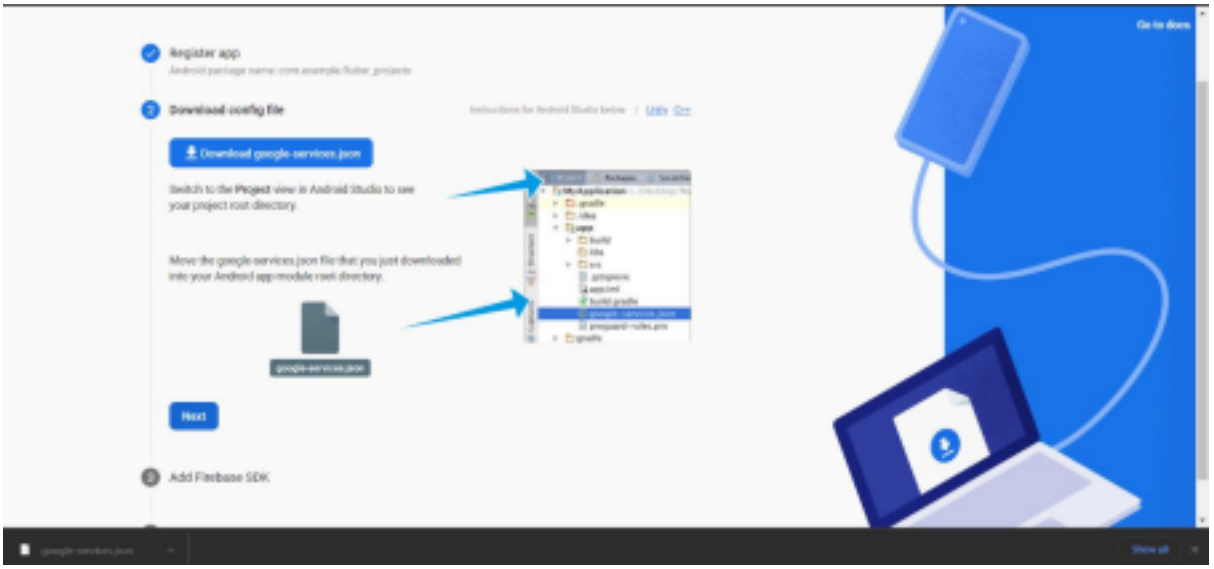
Step 2: Now in Android Studio goto **android->app->build.gradle**.



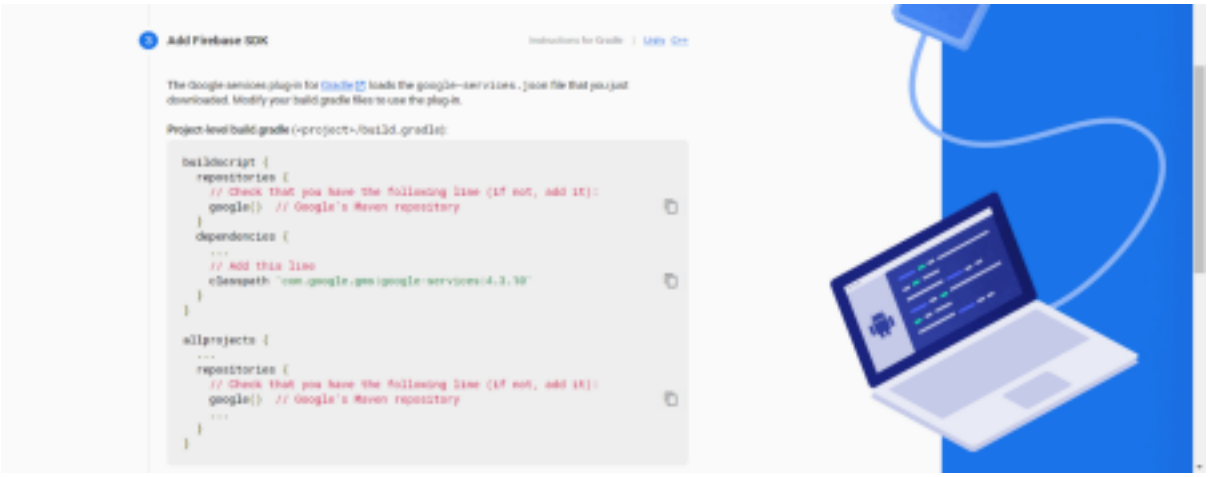
Then in that there is **applicationID**(as shown above) copy that and paste in **Firebase** (in **Android Package Name** Field) and click on **Register App. Also** Set `minSdkVersion 21 (as shown above)`



Step 3: Download **google-services.json** file and copy the Downloaded file in **android->app->src** Folder.

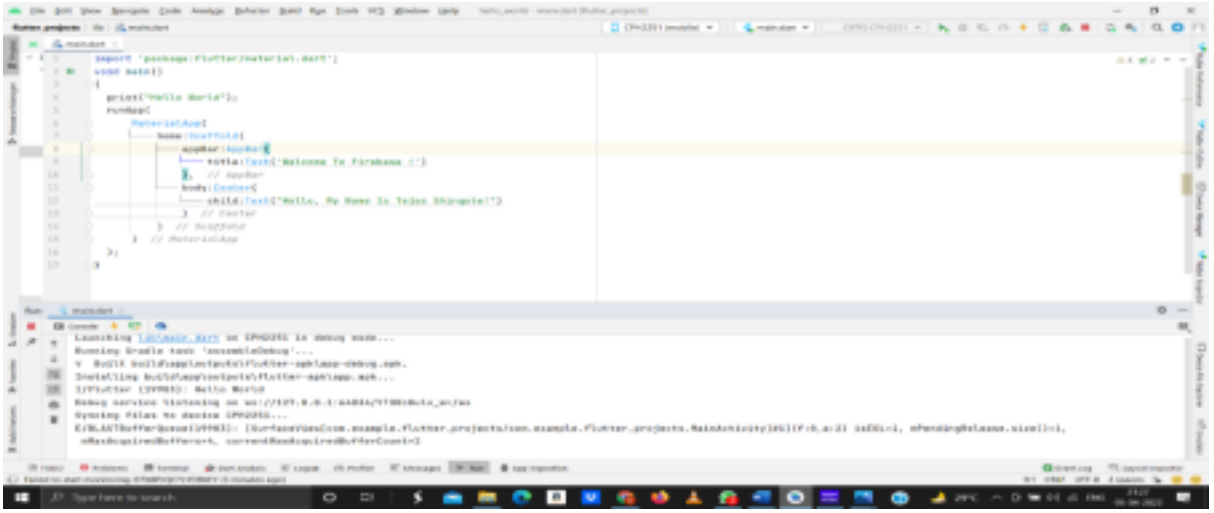


Step 4: Click on **Next** And Go To **Add Firebase SDK** on firebase.google.com and **Copy the line classpath 'com,google services:4.3.10'** under **dependencies** in build.gradle file in **android folder** (not in build.gradle file in src folder) and modify the line as **'com,google-** services:**4.0.1'**



Step 5: Now Go To **android->app->src->build.gradle** file and at the end of this file paste the Highlighted Line In Below Image

Step 6 : Now to check whether we have did all the steps and changes correctly Run **main.dart** file and if it runs successfully and gives output correctly(as shown below) then we have succeeded till now.



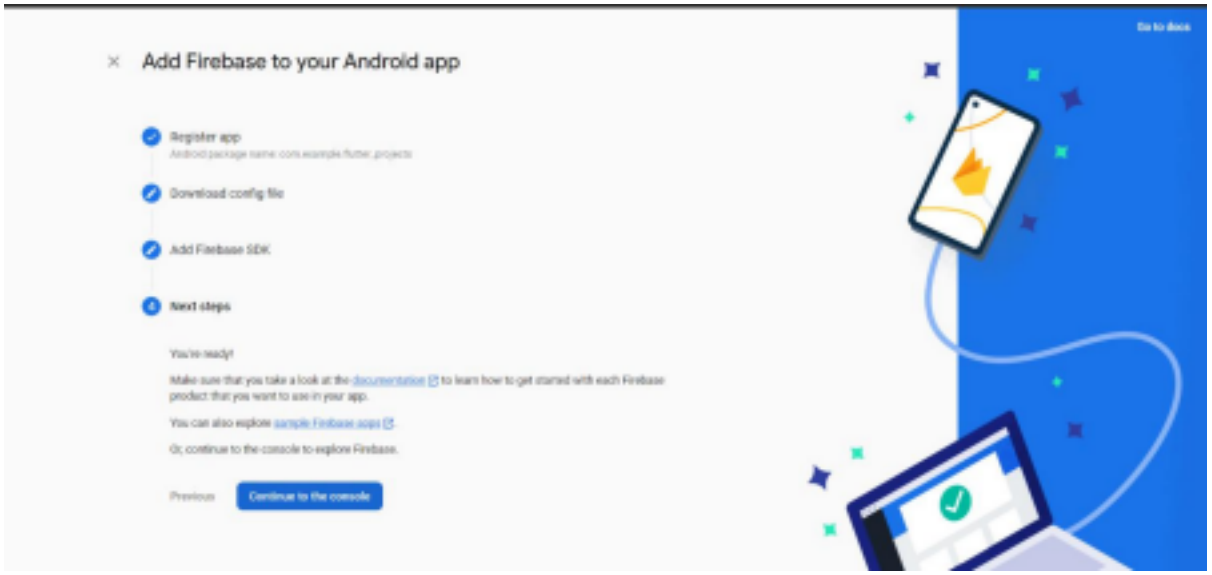
import 'package:flutter/material.dart';
void main()
{
print("Hello World");
runApp(
MaterialApp(
home:Scaffold(
appBar:AppBar(
title:Text('Welcome To Firebase !')
), // AppBar
body:Center(
child:Text("Hello, My Name Is Tejas Shirgaple!")
) // Center
) // Scaffold
) // MaterialApp
);
}

Step 7 : Now add below two lines in pubspec.yaml file

```
firebase_auth: ^3.3.12
cloud_firestore: ^3.1.11
```

Step 8: Now again **Run the main.dart** file to check if it gives correct output as shown above in **Step 6**

now Click on Next



And then Click On Continue to console.

DONE !
